

Long-running wet sluff at Black Mtn

Date

Sat, 07/06/2024 - 11:30

Activity

Snowboarding

Skinned up the large NW snowfield on Black Mountain on Saturday July 6 to lap what remained. Surprisingly, coverage was very good. We descended just after 11am. Turns on the shallower sun-exposed aspects on the way down triggered large sluffs which ran for ~200ft on the top 2-3 inches of the snow.

Region

Out of Advisory Area

Location (from list)

Black Mountain

Observer Name

N. Dea
