

Recent avalanches noted on the NE-E aprons on cedar mountain. SS-N-R2-3-D2-I These appeared to have possibly happened during the last storm cycle and looked to be isolated to layers within the new old snow interface. I also noted similar activity on the same aspects on the adjacent ridge during our approach.

Advisory Region Northern Madison Longitude -111.51W Latitude 45.23N **Avalanche Details:** <u>Recent avalanche activity in Cedar Basin</u> Northern Madison, 2025-01-29
