

Good Stability Texas Meadows Area

Date

Mon, 04/21/2025 - 11:55

Activity

Skiing

Toured through Bradley's Meadow today and N into the drainage and the backside of Texas Meadows. Approx 6" of dense, new snow. New snow has bonded well and we couldn't get anything to move or sluff. Zero shooting cracks, no collapsing on N, E, or S aspects. Nice skiing with the existing layer supporting the new snow.

Location (from list)

Brackett Creek

Observer Name

C. Robinson
